EDUCATION

University of California - San Diego

Bachelor of Science in Mathematics-Computer Science

La Jolla, CA

Sep. 2022 – Jun. 2026

PROJECTS

Personal Portfolio Website | *HTML, CSS, Bootstrap*

December 2025

- Designed and built a lightweight personal portfolio website to present selected programming projects, technical interests, and academic background.
- Used Bootstrap components and utility classes to create a responsive layout and navigation to GitHub, LinkedIn, and resume resources.

Helluva Boss Dialogue Analysis | *Python, Jupyter, Regex, Matplotlib*

Jul. – Aug. 2025

- Developed a Python text-analysis tool to measure how individual characters used variations of a selected profanity across the series.
- Processed multi-season episode transcripts and attributed dialogue to characters using pattern matching and transcript structure.
- Applied regular expressions to normalize inconsistent formatting, identify word variants, and handle edge cases including embedded song lyrics.
- Aggregated usage frequencies by character and generated statistical visualizations in Matplotlib.
- Published the analysis in a Jupyter Notebook, receiving approximately 190 community upvotes and references in follow-up discussions.

Terminal Calendar | *C*

Aug. 2026 – Sep. 2026

- Developed a terminal-based calendar application in C for managing events across a one-week schedule.
- Implemented event creation, removal, duplication, and rescheduling using a custom singly linked list.
- Enforced scheduling constraints by detecting event conflicts and rejecting invalid start and end times.
- Managed dynamic memory manually by handling allocation failures and freeing heap-allocated memory when no longer needed.

TECHNICAL SKILLS

Languages: Python, C, HTML, CSS, JavaScript

Frameworks: Bootstrap

Developer Tools: Git, Vim, Visual Studio Code

Libraries: Jupyter, Matplotlib, re
